WHAT IT IS

One shop-floor system in place of spreadsheets, paper forms and chat groups. Every shift is opened, run, checked and closed inside it — so **production, quality, maintenance and logistics** read the same numbers at the same moment.

IN USE TODAY

2 months live

202 operators tracked	27 production lines
518 machines & dies	109 part numbers
5,465 stop events logged	1,104 4M changes controlled
9,433 attendance + PPE records	898 PFMEA failure modes

BUILT ON

Platform	React 19 · PostgreSQL · realtime sync
Devices	Shop-floor TV · tablet · phone (installable)
Alerts	In-app · push · Telegram by topic
Control	11 roles · 38 forms · full audit log
Maths	TPM / AIAG standard formulas — no AI in the decision path

ROLL-OUT PLAN

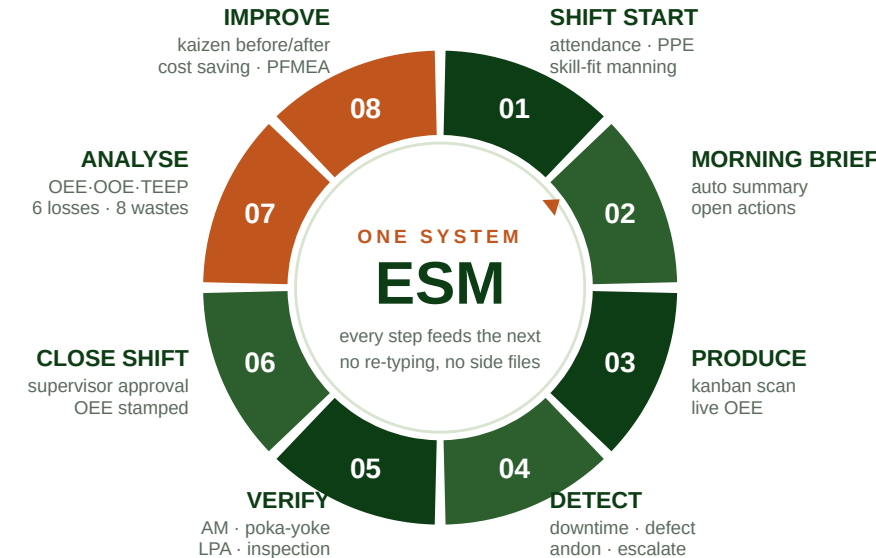

100% complete by 31 Oct 2026 — then sustain

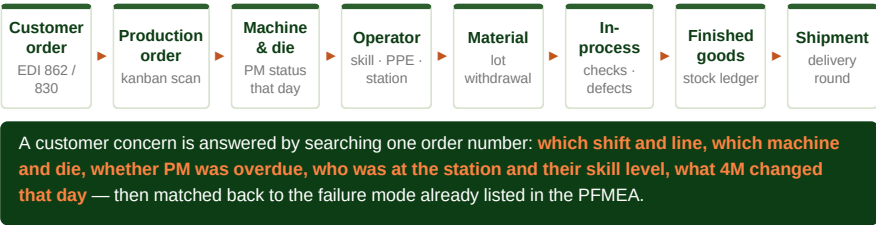

THAI SUMMIT GROUP

THE DAILY OPERATING LOOP

one shift, eight steps

ONE ORDER, FULL TRACEABILITY

A customer concern is answered by searching one order number: **which shift and line, which machine and die, whether PM was overdue, who was at the station and their skill level, what 4M changed that day** — then matched back to the failure mode already listed in the PFMEA.

MODULE MAP

57 screens · 9 areas

Overview - Live plant map (colour by OEE / downtime / manpower) - Department dashboards - Executive & group roll-up	Production - Attendance & PPE · line manning by skill-fit - Daily report · shift close approval - Production planning (OT / night / holiday)
Analytics - OEE / OOE / TEEP · true-OEE - Root-cause engine (7 automatic findings) - Order traceability · Value Stream Map	People - Skill matrix 0-100 · auto EXP - OJT training records - Shift roster A/B/C
Logistics - Store & kanban pull · rundown stock - Delivery walk-back schedule - Shortage alert · route & transport	Maintenance - Work order 7 steps · response / MTTR KPI - AM / PM planning & forecast - Spare part rank A/B/C · QR scan
Quality - Inspection check sheet - SPC / Cp-Cpk · NCR · CAPA-8D - Scrap report · CQI-15 log	Engineering - Process flow · PFMEA · Control Plan - Excel import / export - Revision history by root cause
Master data - Parts · BOM · routing - Equipment & die registry - Document control · role permission matrix	

ALIGNED TO

IATF 16949	Process approach, competence records, change control
CQI-15	Welding event log with approval routing
APQP / PPAP	PFMEA & Control Plan linked by operation no.
8D	3-legged root cause from a real shift
TPM	AM by operators · PM by technicians
Lean	6 big losses · 8 wastes · VSM · kaizen

WHAT IT CHANGES

Answer in seconds, not days "Which shift, which machine, who ran it, was PM overdue, what changed?" — one search on the order number.
Loss you can act on Every stop and defect is classified the moment it happens, then ranked by minutes and money.
Change control that holds Any Man / Machine / Material / Method change raises a 4M record needing supervisor + QA approval before it runs. 38 controlled forms print from the system.

Before we build parts, we build people.
